## DEEP SPACE

Collector's Guide Publishing. Paperback. Book Condition: new. BRAND NEW, Deep Space, Robert Godwin, For as long as mankind has possessed a sense of wonder, astronomy has been practised in one form or another. It can be thought of as having graduated to the status of a true science at the point in history when it became forever separated from astrology. Clearly they were not of the same mould; astronomy was hard to do; astrology was merely hard to swallow. The next significant change came in the early 20th century. Men and women of science felt it was no longer sufficient to simply catalogue the visual characteristics of the stars and other heavenly bodies; the desire to understand their physical makeup, behaviour and creation gave us the study of astrophysics. As the name suggests, this is the physics of astronomical bodies and the space they inhabit. During the second half of the 20th century interest turned also to the other eight planets of our solar system, spawning several new disciplines relating to Planetology, the formation of the solar system, and the possibility of past or present extraterrestrial life. Every decade of the last century brought ever more numerous and fascinating discoveries. It was not until 1930 that Pluto, the ninth planet, was discovered. Only as late as 1978 was it discovered that Pluto possessed a moon. And now, in late 2005, NASA's Hubble Space Telescope has given astronomers evidence that Pluto may have not one, but three moons. In recent decades much interest has also been given to the far reaches of the universe -- far stars; other galaxies, some old, some still forming; and even the earliest detectable galaxies of the universe, at the very limits of our ability to probe. Each field of space study requires its own special...
