Excerpt from Manual of Chemical Examination of the Urine in Disease: With Brief Directions for the Examination of the Most Common Varieties of Urinary Calculi The importance of urinary examinations, in their bearing upon diagnosis, treatment, and prognosis in disease, is now admitted by all who have kept pace with the progress of medical science during the last twenty-five or thirty years. Even if we except the examinations for sugar and for albumen, there are many conditions of the urine, involving either a modification in the proportion of its normal constituents or the presence of abnormal principles, which it is very important to recognize. With regard to certain abnormal principles that may exist in the urine, it is essential to the practical physician, not only to be able to recognize their presence by simple and reliable tests, but, in many instances, to estimate their quantity. In diabetes mellitus, a knowledge of the fact that sugar exists in the urine is a necessary element in the diagnosis; and the influence of dietetic and other measures of treatment, in most cases, is speedily and certainly indicated by the modifications in the proportion of sugar in the urine. Indeed, it is impossible to treat this affection intelligently without estimating from time to time the quantity of sugar discharged by the kidneys. Albuminuria, which is so prominent a symptom in certain diseases of the kidneys that it is often spoken of as if it were in itself a disease, is a condition which must be recognized in the diagnosis of these disorders. It frequently happens that the presence of albumen in the urine is the first...
